Hair Removal

People always had a natural desire to remove unwanted hair. Hair removal practice has been around for centuries. Women in ancient Egypt, Greece and the Roman Empire removed unwanted hair.

Unwanted hair is often a greater concern especially for women and is far more common than we might think. Men also often have unwanted hair on their back or chest.

Hair on women's bodies in our society was never considered a norm or attractive. Excess or unwanted hair growth can be an irritating or downright embarrassing problem for women. Unwanted hair makes women feel aged and unattractive.

Advanced Laser Center has multiple locations throughout New Jersey. To locate the office closest to you, schedule a **free** consultation and a **free** skin test, please visit: www.mylasercenters.com

What Hair Removal Methods Are Available?

There are many methods available to remove unwanted hair including shaving, tweezing, waxing, electrolysis, IPL, laser l and other. Not all of these methods have good results.

Shaving facial hair with a wet razor is not the best choice for women and is not recommended for them. Facial hair grows back very quickly and appears thicker.

Waxing is another hair removal process; its effects generally last from three to eight weeks. Negative side effects include pain and ingrown hair.

Shaving, tweezing and waxing provide only temporary results.

Electrolysis is a slow, time consuming and expensive procedure because each hair must be individually destroyed. Electrolysis is also painful for some individuals and a potential for scarring.

Intense Pulsed Light (IPL) and laser hair removal are considered the latest and most effective technologies.

IPL and laser hair removal both use light to cause thermal damage to the hair follicle.

IPL emits many different wavelengths of light and they are effective for use on different targets. IPL differs from laser by being able to deliver greater energies at optimum wavelengths while causing less damage to the skin.

The laser beam is very narrow, only covering a small spot at a time, while IPL coverage is several times the area. Therefore IPL treatments are faster and a bigger surface area can be treated. At the same time IPL is safer, more comfortable, and more cost effective than laser hair removal.

For more information about hair removal and office locations, visit www.mylasercenters.com

IPL Hair Removal

IPL has advantages: it can treat larger areas at one time; it is safer and less expensive than laser treatment. It causes considerably less pain and discomfort compared to other hair removal treatments.

There is little recovery time needed regarding IPL procedures. People can usually return to normal activities immediately after treatment. However, it is important to follow the recommended instructions after treatments such as minimal sun exposure etc. Ask your laser technician about if any special care is required.

While IPL and laser hair removal have become an increasingly popular treatments, many people want to find out more about the specifics of the treatment, pricing and recovery after the procedure.

Advanced Laser Center in New Jersey provides hair removal and skin tightening treatments with the new generation in hair removal technology systems.

If you are tired of tweezing, shaving, waxing or using depilatory creams for removing unwanted hair on your body, the IPL/laser hair removal procedure just might be right for you. You'll feel more confident when it's time to show off some skin after laser hair removal procedure.

If you live in Tri- State area, you can schedule a free consultation and a free skin test at Advanced Laser Center. Visit [Laser Hair Removal New Jersey](#) website for office locations and pricing.

Laser / IPL Hair Removal Treatable Areas

Almost any area of the body where unwanted hair is a problem can be treated using the latest laser / IPL hair removal systems. Laser / IPL treatments can be used for either facial or body hair removal.

The most popular areas are:

- Upper Lip
- Chin
- Back
- Neck
- Bikini Line
- Legs
- Full Legs
- Chest
- Face
- Forearms
- Underarms

Treatments can last from a few minutes to most of an hour, depending on the size of the area being treated.

The larger the body surface area, the more time the laser hair removal treatment will take.

For instance, Laser / IPL hair removal of the bikini line area can take 15 to 30 minutes per session.

Laser / IPL hair removal of the chest area may take up to one hour.

Upper lip hair removal should take no more than 10 minutes.

Advanced Laser Center has multiple locations throughout New Jersey. To locate the office closest to you, schedule **free** consultation and **free** skin test, please visit: www.mylasercenters.com

Skin Tightening

Skin tightening is a unique facial non-surgical rejuvenation option that produces dramatic results. Laser / IPL skin tightening effectively reduces the appearance of wrinkles and loose skin for a smoother and more youthful appearance.

As we age, our skin changes. Signs of aging can be treated with IPL skin tightening to tighten skin on literally every area of the body.

IPL skin tightening became a very popular procedure for reducing the appearance of fine lines, wrinkles, and other effects of skin laxity.

Facial skin tightening is noticeable immediately after the treatment. You will notice an improved tone and firmness of skin, fine lines will diminish or disappear and wrinkles will be softened. Additional skin tightening will be needed for best results.

Laser / IPL skin tightening helps patients achieve younger-looking, smoother skin without undergoing expensive surgeries. Laser / IPL skin tightening is appropriate for men and women.

Most people choose laser / IPL skin tightening to:

Firm forehead and cheeks

Lift the eyebrows

Tighten neck and jowls

Reduce eyes wrinkles

Diminish the appearance of cellulite

Tighten skin on the abdomen, buttocks, arms, and thighs

Rosacea Treatment

Rosacea is a long-term disease that affects the skin. Its symptoms include redness, pimples, and, in later stages, thicker skin. It is caused by dilated capillaries or tiny veins, usually on the nose, forehead and cheeks and it can be hereditary.

The exact cause of rosacea is unclear. It typically affects fair-skinned women between the ages of 30 and 50 and can be quite painful, particularly in winter, when cold air irritates the inflamed skin. Rosacea can get worse, progressing to persistent redness, facial burning or itching, pimples, bumps, and visible blood vessels.

About 14 million people in the United States have rosacea. Many people reported that rosacea can lower one's self-esteem, self-confidence and can cause to feel uncomfortable around other people.

Lasers / IPL treatments will help diminish or eliminate signs and symptoms of rosacea.

IPL treatments of rosacea could be the best treatments available, particularly for clearing up redness of the skin.

Advanced Laser Center has multiple locations throughout New Jersey.

Photofacial

The signs of aging play no favorites, they hit everyone eventually, and sooner or later people want to look younger and have less fine lines.

The photofacial is the newest and popular anti-aging method that improves skin's texture, tone and appearance. Photofacials are series of gentle pulsed light treatments. Precise amounts of light energy are delivered through the skin's surface to stimulate the production of collagen and as the new collagen forms; it softens and tightens the appearance of aging skin.

The end result of treatment is smoother; more even toned skin with less redness and decreased flushing, diminished blood vessels and more balanced pigmentation. The skin after a treatment will have a natural, more youthful appearance. Photofacials reduce redness, wrinkles, large pores and sun damaged spots.

The typical IPL Photofacial treatment lasts about 30 minutes.
